

# How Reflex HA helped a Quarter Horse with hock spurs get back in show condition

*“After putting him on Reflex HA, he was sound for the next three years of his show career...”*

- LOUANN SANDERS

**Louann Sanders**, a Quarter Horse owner and trainer, was experiencing issues with one of her prized show horses. For some reason, five-year-old Repeat Potential was periodically coming up sore after workouts. At first, it seemed like nothing. But when it persisted, Louann had him examined. Unfortunately, Repeat Potential was diagnosed with spurs in the hock – a condition that can prove very painful, and even cause lameness, if it persists.

Based on the recommendation of her veterinarian, Louann put Repeat Potential on Reflex HA. The results were exactly what she hoped for.

“For the first two weeks, we put him on a double dose,” said Louann. “After that, we went down to a regular dose. And ever since putting him on Reflex HA, he was consistently sound. That lasted for the next three years of his show career. I was even able to sell him.”

Louann and Repeat Potential’s story is just one of a number of successful stories associated with Reflex HA with MHB3®,

the high molecular weight HA supplement that supports healthy joints, maintains lubrication, and promotes flexibility in horses.

Want to safely keep your horse’s joints healthy? Ask your vet about Reflex HA. Or, if you have a story about using Reflex HA for your horse, send it to us at [info@hagyardpharmacy.com](mailto:info@hagyardpharmacy.com)
