

How Relyne GI helped this treasured Thoroughbred recover from colic

"She is so willing to work and has so much energy. I am so happy I have my horse back."

- KATHERINE SZYNAL

Katherine Szynal had a newfound joy in her horse At The Palace. A Christmas present from her mother after the death of her father in 2016, At The Palace, better known as El, became more than just a horse. For Katherine, the Thoroughbred was family. So when El fell ill from two bouts of colic in 2018, Katherine knew she had to take action.

The results from a scope done by her veterinarian showed that El was suffering from stomach and pyloric ulcers. Katherine slept with her in the barn during each colic incident and feared that she would have to undergo emergency surgery.

Katherine's vet administered prescription medications for seven weeks in an effort to treat the colic, which only resulted in moderate improvements for El. "We were running out of options with prescription medicine," said Katherine.

The vet then recommended that they try the Relyne GI supplement twice daily. Since switching to Relyne, El has shown significant improvement. She no longer has signs of colic or discomfort, and has even gained all of her weight back. "I believe Relyne saved my horse's life," Katherine said.

Katherine and El's story is one of a number of successful stories associated with Relyne GI, the high-molecular-weight

hyaluronan supplement designed to maintain daily gastric comfort for horses.

How Relyne GI helped a mare with colic return to training

DEVON

ONDIAMA

“It seems that the horses began to relax after five days on Relyne...”

- SANDY OSBORN
Professional Dressage Trainer

Sandy Osborn, a 40-year dressage professional, knew she needed to take steps to quickly resolve the colic her mare, Ondiama, was experiencing following an ovary removal surgery. After examination, her veterinarian believed Ondiama's colic was caused by high doses of post-surgical medication agitating her digestive system.

Based on the recommendations of friends, Sandy immediately started Ondiama on Relyne GI, and she has not colicked since. “The results have been amazing!” Sandy added, “She was even more accepting of the rider’s legs against her body on Relyne GI.”

Since then, she has started six more of her clients’ horses on Relyne GI. “Most of the horses’ training has improved markedly since starting on Relyne GI, I can’t say enough good things about it!”

Sandy also credits Relyne GI with helping to prevent her clients’ mare, Devon, from struggling with any bouts of colic. Devon experienced separation anxiety when traveling alone to horse shows, and was also nervous when being stabled. Under stressful conditions such as these, it is common for horses to experience bouts of colic. Using a daily regimen of

Relyne GI, Devon never experienced colic despite seemingly constant anxiety and stress.

Sandy’s story is one of a number of successful stories associated with Relyne GI, the high-molecular-weight hyaluronan supplement designed to maintain daily gastric comfort for horses.
